└─ classesgearbox.npy	372 bytes	npz File
└─ classesmodel.npy	3 KB	npz File
└─ classesnotRepairedDamage.npy	362 bytes	npz File
└─ classesvehicleType.npy	456 bytes	npz File
└─ Resale value prediction final.py	6 KB	py File
└─ resale_model.sav	15.6 MB	sav File
└─ testing the model.py	2 KB	py File

- “Resale value prediction final.py” has all the mastery model building architecture, that Collects Data, Import necessary packages, Pre-process images, and passes on to Network Model and Saves Model Weights into “**resale_model.sav**”.
- “Resale_flask.py” takes weights and Inputs from “User Interface” to Predict output.
- The .npy format is the standard binary file format in NumPy for persisting a single arbitrary NumPy array on disk. The format stores all of the shape and dtype information are necessary to reconstruct the array correctly even on another machine with a different architecture.
